
BITCOIN: ZERO

**Why, on July 21, 2018, the U.S., China,
Russia
(and 16 of the world's richest countries)
will join together to ban Bitcoin.**

On July 21, 2018, leaders from around the world are expected to release an important edict:

Cryptocurrencies will be banned on a global scale.

The United States, China, Russia and some of the world's largest and most powerful economies will put their full force behind the ban.

Bitcoin will go to zero.

And 99.9% of all other "crypto" coins will be deemed worthless, too.

The ban—expected to be announced at a secret meeting in Buenos Aires—will be backed by all the world's top central banks.

Presidents Donald Trump, Xi Jinping, and Vladimir Putin will all send high-ranking envoys to Argentina to make sure the ban is passed.

But it's not just the most powerful leaders on earth who will endorse this...

Credit card companies like Visa and Mastercard... the Clinton Foundation... the world's 2nd richest man (details in a minute)... as well as most mainstream media companies are also pushing hard to end crypto.

In fact, there's a good chance the only reason you're watching this today is because a freedom-loving friend sent it your way.

(Already, several of the biggest websites in the world—including Google and Facebook—have forbidden businesses like ours from even mentioning “Bitcoin” or “cryptocurrencies.” Many believe they were strong-armed by the U.S. Government.)

But it's my patriotic duty to reveal the truth, no matter how devastating the consequences...

And to warn Americans before their crypto gains are wiped out by despotic governments.

But the sad reality is worse than that.

You see, this edict will not only hurt all the speculators who turned “cryptos” into the biggest bubble of all time...

It will also have a surprising effect on the savings of millions of Americans.

Even if you've never bought Bitcoin or a single crypto in all your life.

In addition, the ban will usher in a new era of digital surveillance worse than anything sanctioned by the NSA or the Patriot Act.

Today, I'm going to share all the ugly details with you.

Including *the exact blueprint*, I believe the global elites are about to roll out...

As early as July 21st.

I'll also share the steps I—along with several members in my inner circle—are personally taking to safeguard and protect our wealth.

My name is E.B. Tucker.

I belong to a group of financial “watchdogs” that's been around since 1978.

Operating mostly underground, our private network has swelled to over 2 million members—more than the digital readership of *The Washington Post* and *Forbes* combined.

Our members include multiple *New York Times* best-selling authors, retired hedge fund managers, as well as former CIA insiders.

One of our figureheads is 2-time best-selling author Doug Casey. He leads one of the “branches” of this watchdog network.

Doug, apart from becoming a multi-millionaire speculating on stocks, has made some pretty big geopolitical calls...

He predicted the fall of the Berlin Wall, the 9/11 attack, as well as president Trump’s victory a full 16 months before the election.

(He even made 2 separate wagers on it, collecting \$2,500 and 100 ounces of silver.)

Our group also foresaw the crash of '87... the dot-com bubble... the collapse of the housing market... Brexit... as well as the rise of cryptos.

Because of this, we’ve been featured in every major financial news outlet of note, including *Fox*, *Forbes*, *Barron’s*, *Yahoo! Finance*, and *The Wall Street Journal*.

And, right now, we’re issuing another important warning...

Bitcoin and 99.9% of cryptocurrencies are about to get banned.

Now, I’m sure this probably doesn’t come as much of a shock to you...

After all, why would governments continue to allow a currency *that’s stated purpose* is to take control away from them?

They won’t.

And all the evidence shows they’re banding together to make sure of it...

Already, several meetings with high-ranking officials (including Janet Yellen and IMF President Christine Lagarde) have taken place.

And, on July 21st, in a lush conference room in Buenos Aires, we believe the final “nail in the coffin” will be hammered down.

That's when finance ministers and central bank governors from the 20 most powerful countries on earth convene for the "G20" summit.

What's the "G20"?

It's just another fancy event where global elites gather to sip champagne and decide what *they* believe is in *our* best interests...

The Paris Accord. NAFTA. TPP.

All brainchilds of meetings like this.

Of course, it's always in the name of "the public good."

But the public gets no say.

All we see are the glossy pictures while—*behind closed doors*—secret agendas are being pushed forward...

And, right now, we believe the single biggest item on the agenda is banning cryptos.

Why it Ends Now

Cryptocurrencies, you see, have gotten way too big for governments to ignore.

It's not like 5-6 years ago when it was just a few teenagers living in their parent's basements who knew about Bitcoin.

Today, it's a global phenomenon...

And, recently, as much as \$800 BILLION found its way into cryptos.

That's more than the GDP of 175 separate countries, including oil-rich Saudi Arabia.

Now, here's the thing...

Every dollar invested in crypto is a dollar that doesn't benefit a money hungry, debt-riddled government.

On top of that, many of the folks striking it rich in cryptos simply aren't declaring their profits.

(Coinbase, one of the world's largest exchanges, was recently ordered to turn over the identities of 14,355 Americans to the IRS after only a few hundred filed their taxes.)

So, it's a direct hit to the gut of big government.

That's why almost every major country on earth is pushing hard to end cryptos.

China, for example, has already banned crypto exchanges and revealed (in a leaked document) they would shut off electricity to people caught "mining" Bitcoin.

Russia is taking action too...

Putin publicly stated he wants to ban all cryptos, calling them the domain of money launderers, tax evaders, and terrorists.

South Korea has issued regulations.

And even the Fed's own Vice Chairman Randal Quarles has declared cryptocurrencies a threat to "financial stability."

But if these countries want to succeed, they know they must all work together...

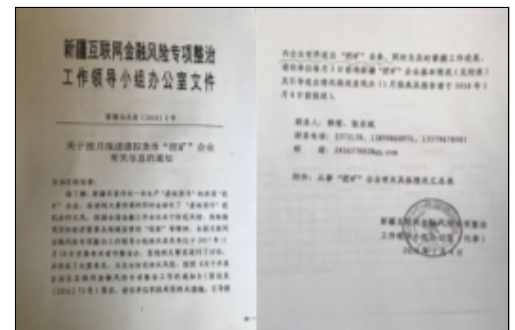

As German central bank director Joachim Wuermeling says:

Crypto regulation would "Only be achievable through the greatest possible international cooperation, because the regulatory power of nation states is obviously limited."

Once all countries band together, crypto lovers won't have anywhere to run.

There will be no escape.

You see, central bankers all have the same interest:

Leaked Chinese document

To protect their cartel.

They all play the same game...

They print money out of thin air...

Backed by absolutely nothing...

And everybody accepts it—*under penalty of law!*

(That's why your dollar bills say, "legal tender" right next to George Washington's portrait.)

These guys don't want this party to stop.

That's why, already, the IMF, World Bank and over 100 central banks held a private meeting in Washington, D.C. at the Eccles building to discuss cryptos.

And it's also why—*this year alone*—the top 20 countries are meeting... not once... *but 3 separate times* to solve this issue.

In fact, at their first meeting, back in March, France and Germany presented a joint proposal on how to "regulate" Bitcoin.

A second meeting is days away...

And by the time the third (and last) meeting comes around on July 21st... we expect the final details on the "world crypto regulation" will be ironed out...

You'll see it plastered all over the news:

"Bitcoin and 99.9% of Cryptos Banned."

Shortly thereafter, Bitcoin will go to zero.

And 1,500-plus "crap coins" like Dogecoin, Mooncoin, Insanecoin, Garlicoin and Pizzacoin will all plunge into oblivion.

The dreams of millions of crypto investors will be squashed.

(Some, at the expense of their life savings.)

Meanwhile, on the other side, fat cat bankers will be having a good laugh...

In one fell swoop, their biggest competition will be wiped out!

Now, you might be wondering...

Why do I say only 99.9% of cryptos will be banned and not 100%?

Great question.

You see, these central bankers are pretty sneaky.

There's actually a good (for them) reason not to ban all cryptos...

The Global Elite's Creepy "Post Crypto" Blueprint

While cryptocurrencies are a thorn in the side of the government...

They do realize their massive potential.

In fact, the technology behind cryptos—the "blockchain"—is being hailed as revolutionary...

It's the perfect tracking tool.

Wal-Mart, for example, said the blockchain helped them reduce the time it took to trace mangos from 7 days down to 2.2 seconds.

That's 99.99% faster.

But not only that...

The blockchain also allows money to be moved around much faster and much cheaper than the way it's currently being done today...

That's why all the big banks are researching cryptos.

And it's also why State-Issued cryptocurrencies will NOT be banned.

You see, already, almost every single government in the world is working on its own cryptocurrency.

According to a recent study by the University of Cambridge, a full 80% of central banks were either researching or actively developing their “own Bitcoin.”

The Chinese. Russians. Emiratis. Japanese. English. Australians. Canadians.

All are racing towards becoming the first major country in the world with a state crypto.

As Olga Skorobogatova, deputy chief of the Bank of Russia, says:

“Regulators of all countries agree that it's time to develop national cryptocurrencies, this is the future.”

That means, soon, we could see “Bitcoin,” the “CryptoRuble,” as well as America’s own “Fedcoin.”

This new money, however, will have some grave consequences...

And it will forever change the way we earn, save, and spend money.

It will also act as a new digital surveillance tool worse than anything currently sanctioned by the NSA.

(You’ll understand why in a minute.)

But first, I need to explain something...

The reason governments will be able to ban cryptos so easily...

It’s simple.

You see, they’ve already got the support of some of their largest campaign contributors—*big finance*...

Jamie Dimon, for example, JP Morgan Chase’s CEO, famously called Bitcoin “a fraud.”

Study: 80% of countries researching own state crypto

And Mastercard's CEO Ajay Banga said "non-government mandated currency is junk."

Recently, Visa, Mastercard, Discover, Capital One, Citi, JP Morgan Chase, and Bank of America all banned Bitcoin from being purchased on their credit cards.

(That's a big reason cryptos crashed more than 50% earlier this year.)

The mainstream media is clearly on the "anti-crypto" bandwagon, too...

Facebook banned all advertising related to cryptos on their network back in January.

And Google, Twitter, MSN, and Yahoo! have all followed suit, issuing bans of their own.

The "intelligentsia" is sounding the alarm bell, too...

Joseph Stiglitz, former chief economist at the World Bank, said Bitcoin "ought to be outlawed."

He went on to say the government "could close it down at any moment."

If this feels like all the global elites are banding together to stop cryptos... you're 100% right.

Now, let me be clear...

I'm not personally a big fan of cryptos.

In fact, I think most are just plain stupid.

(Nowadays, anyone with an internet connection can create one in 6 minutes or less.)

However, *I do* believe in our God-given right to decide what's in our own best interests.

Whether or not you want to own Bitcoin should be YOUR choice, not Big Brother's.

And... not only that... but I believe the next part of the global "crypto blueprint" will be truly scary... even for those who've never bought a single crypto in all their life.

That's why I'm urging Americans everywhere to prepare (and protect) themselves today with the simple steps I'm going to share in a bit.

Here's Where it Gets Scary...

Now, let me ask you a question...

Do you value your privacy?

If so, then you're going to hate this...

You see, central-bank cryptos mark the beginning of the end for paper money.

By now, I'm sure you've likely heard about the "war on cash."

How countries around the world are cracking down on cash purchases.

In India, for example, they banned 85% of all paper currency back in 2016...

In Europe, they're phasing out the 500-Euro note, their biggest bill...

And, in many places around the world, you can't even pay for rent in cash.

These are just three examples. There are tons more.

So, why are all these countries doing this?

As my colleague Doug Casey explains:

"Why? Because they say a cash economy facilitates tax evasion. It facilitates underground transactions. It facilitates drug transactions. It facilitates terrorism where \$100 bills are passed around in suitcases and so forth. So they would like to kill all currency."

You and I both know that's ridiculous.

You don't need to be a criminal to enjoy the convenience (and privacy) cash offers.

But sadly, the writing's already on the wall...

In America alone, the “underground” economy costs the government **an estimated \$500 billion EACH YEAR.**

That’s a huge chunk of change!

Especially for a country that shuts down every time a new budget increase comes along.

Not only that...

But thanks to rising interest rates, it’s soon going to cost Washington billions more to service our mammoth \$21 trillion national debt.

(As then-candidate Donald Trump said back in 2016, “What happens if that interest rate goes up 2, 3, 4 points? We don't have a country.”)

That’s why this situation is urgent. And why the government can’t afford to let *any* cash transactions go untaxed...

In fact, the U.S. government is *already* starting to crack down on cash.

Under the Bank Secrecy Act, your bank is legally forced to “rat” you out if you withdraw more than \$10,000 in a single day.

(They can also report you, in some cases, if you withdraw less...)

Flying out of the country?

Don’t bring too much cash or gold. Otherwise, your details will be sent over to the Treasury Department’s Financial Crimes Enforcement Network.

(It’s true. Look it up. Form 105...)

In fact, for all intents and purposes, your money is trapped here in America.

Thanks to the Foreign Account Tax Compliance Act (or FATCA), it’s now almost impossible for Americans to open a bank account outside the U.S.

But Congress isn’t alone in this assault.

*“We don’t have a country.”
The real reason Washington
wants to ban cash...*

Once again, the elites are teaming up...

Visa is paying businesses as much as \$10,000 to stop accepting cash...

JP Morgan Chase refuses to accept cash for any credit card, car loan, or mortgage payment.

(You also can't store cash or coins—including gold—in their safety deposit boxes.)

And even Bill Gates and the Clinton Foundation are fighting cash through their "Better than Cash" alliance!

(While it's difficult to prove explicitly, there's evidence linking Gates and Clinton—through their support of the United States Agency for International Development—to the recent cash ban in India.)

But any way you slice it, the message is clear...

We're being "attacked" from all sides.

And the walls are closing in.

If these elites get their way, cash and cryptos will soon be a thing of the past.

And that can only mean one thing:

More oversight. More taxes. And more control.

Our "Orwellian" Future

Just think about it...

We'll have no more cash...

And we'll all be forced to use a totally trackable state crypto.

That means essentially ALL our transactions will be "on the grid."

Worse than today!

And once your money is trapped, there's no end to the damages central planners can do.

In France, for example, you have to pay a **"wealth tax" of 1.5%—each year—**on top of income tax...

And, in several other countries, they charge **"savings tax"** where people *pay banks* for the privilege of *lending them* money!

Crazy, right?

Hopefully we'll never see that here in America...

But you never know...

Income taxes were supposed to be temporary. And we now pay taxes on Social Security.

But new taxes aren't the only thing we could see with a state crypto.

Because cryptocurrencies are essentially "smart money," they can be programmed to do anything the bureaucrats like...

Including some pretty scary stuff.

What do I mean?

Overweight?

With a "smart" state crypto, maybe the government will program their new crypto-dollar to prevent you from buying a Twinkie or a can of Coke.

(Sounds crazy? Remember that several cities—including Philadelphia—have already implemented so-called "soda taxes.")

Want to buy a gun?

Who needs a gun registry with Fedcoin!

With the simple push of a button, a legislator can decide whether or not you qualify.

Fedcoin could make a national "soda tax" a reality...

Listen...

My intention here isn't to scare you.

I don't want ANY of this stuff to happen.

However, the truth is, some of it is already happening...

Consider...

42 million Americans today are prohibited—*by Federal law!*—from buying liquor, cigarettes or “any non-food items.”

I'm talking, of course, of our country's massive food stamp program.

And while state welfare is a whole other topic on its own (one which I have some very strong feelings about)...

It does go to show that the government can, will (and does) control what they will and won't let us buy.

(The most obvious example of this, of course, being drugs and medication.)

And, unfortunately, this does seem to be the way things are headed here in America...

U.S. Government Invests Millions

You see, the Fed has already received 5 different proposals on how to run Fedcoin, its own state crypto...

And the Boston branch of the Fed recently teamed up with the Bank of England to work on a joint crypto project.

In fact, the U.S. government has now sent out millions of dollars to top researchers at Princeton, Cornell, Berkeley, and Purdue to study cryptos.

Here's how the transition to Fedcoin will occur, according to “R3”, a coalition of 70 top financial institutions.

“The primary role of Fedcoin would be as a substitute for cash. Were the central bank to agree to the creation of Fedcoin it would stand ready and willing to convert paper money into Fedcoin. Cash submitted for Fedcoin would be destroyed.”

Cash submitted for Fedcoin would be destroyed.

Make no mistake.

Bitcoin and its imitators are on their way out. And state cryptos are on their way in.

As Kenneth Rogoff, author of *The Curse of Cash*, states:

“We have to remember the private sector invented standardized coinage, and then the government eventually regulated it, took it over. Same thing (happened) with paper currency... What makes you think it will be different? I'm sorry, when it comes to the monetary system, the government makes the rules. You cannot win the game.”

And not only does the government make the rules... they also decide who gets the spoils!

Consider:

Central banks have admitted they are using a crypto platform developed by J.P. Morgan called Quorum to study and develop their own cryptos!

The more things change, the more they stay the same, don't they?

The little guy has no chance...

How to Protect Your Wealth

Alright.

So, knowing all this, what can you do to protect yourself?

The first thing, of course (if you own Bitcoin or any other crypto) is to get rid of your holdings.

When the final G20 meeting happens July 21st and the official edict is released, it will be too late...

Millions of crypto owners will all be rushing to the exit gates at the same time.

You don't want to be among them as prices crash down.

So that's step 1.

But dumping cryptos is the easy part...

How do you protect yourself against a new state crypto and all the nastiness that could ensue?

Luckily, we've been tracking and studying this situation for two years now.

We were among the first to predict the rise of state cryptos like Fedcoin. And our work on the subject has been viewed more than 1.7 million times.

We've put together what we believe is the ultimate guide to protecting yourself...

It's called ***Surviving Fedcoin: How to Survive (and Profit) From America's Coming Currency Change.***

Already, over 20,000 patriots have armed themselves with our 132-page blueprint.

And, inside, you'll discover everything you need to know on how to shield your money from prying eyes... maintain your privacy... and also "turn the tables" on the government and profit from the upcoming currency shift.

Now, here's the thing:

When paper cash dies and federal money goes "crypto," your savings will be at much greater risk.

First off, there's what we discussed earlier...

How much easier it will be for the Feds to tax your savings via a wealth tax or a savings tax.

But, on top of that, your chances of getting hacked and defrauded go through the roof.

We've all heard about the various data breaches that have happened at places like Equifax and Facebook.

But consider this...

Did you know that, according to *Reuters*, the Federal Reserve got hacked "*more than 50*" times in a 5-year span?

And—in a single one of those hacks—the Fed lost \$81 million!

Is that who you want to trust your money to once "Fedcoin" goes live?

That's why you need protection.

You want "real" money that won't get devalued by some Washington pencil-pusher and that can't get hacked or tracked.

I'm talking, of course, about gold and silver.

Gold—along with silver—will soon be the only "private" forms of money left in America.

The government can't track your purchases on a digital ledger when you buy with these metals.

Now, this probably isn't news to you...

But what *you may not have heard* is that certain coins are now being considered for "digitization."

That means—very soon—certain gold and silver coins could be tracked just as easily as the digital money in your bank!

On page 63 of the *Surviving Fedcoin* book, we share with you the only type of coins you should consider buying today.

These are the ones guaranteed to bypass digital tracking.

We'll also share with you **the last place in America to buy "untraceable gold."**

Look.

Even if you buy *the right type* of coins... *if you buy them at the wrong place...* then the government could still be tracking you.

That's because, when you buy anything using a credit card, bank draft, or wire transfer, you've created a permanent electronic record the government can access.

Worse yet... on many transactions... gold dealers are now required by law to keep detailed records, addresses, and other information on their buyers.

On page 65 of *Surviving Fedcoin*, we share a specific location where you can still legally buy gold and NOT get reported.

(And, no, I'm not talking about pawn shops, either.)

Do You Own These Items?

In the book, we'll also cover the 5 items to stockpile before the ban (Chapter 13).

Now, here's the thing...

As cryptos get banned and governments introduce their own alternatives, there's bound to be chaos and turmoil...

In India, people recently had to resort to barter... and 5 people died of exhaustion while waiting in line at an ATM... when the country issued currency regulations.

And while I'm not a "prepper" per se... and I think our country would fare better than India... I did take notice when Germany recently warned its citizens to stockpile food and water.

Here, we cover the 5 essentials you should stockpile right now.

Obviously, food and water are on the list.

But I'd wager money you *don't* have the other 3 "must haves."

See pages 79 to 85...

But that's only the beginning...

Inside ***Surviving Fedcoin: How to Survive (and Profit) From America's Coming Currency Change***, you'll also discover...

- Why you should never, ever withdraw cash from an ATM... (Page 15)
- How to prevent your computer from getting "crypto-jacked" or being held up for "crypto ransom"... (Page 17)
- The one piece of software that can prevent your bank account information from being stolen (plus, the one step you **MUST** take to protect each of your accounts)... (Page 71)
- The 3 best places to hide any gold, silver, or cash in your home (most people get this wrong)... (Page 16)
- The safest legal way to carry a boatload of money across the border and not have to declare it... (Page 77)

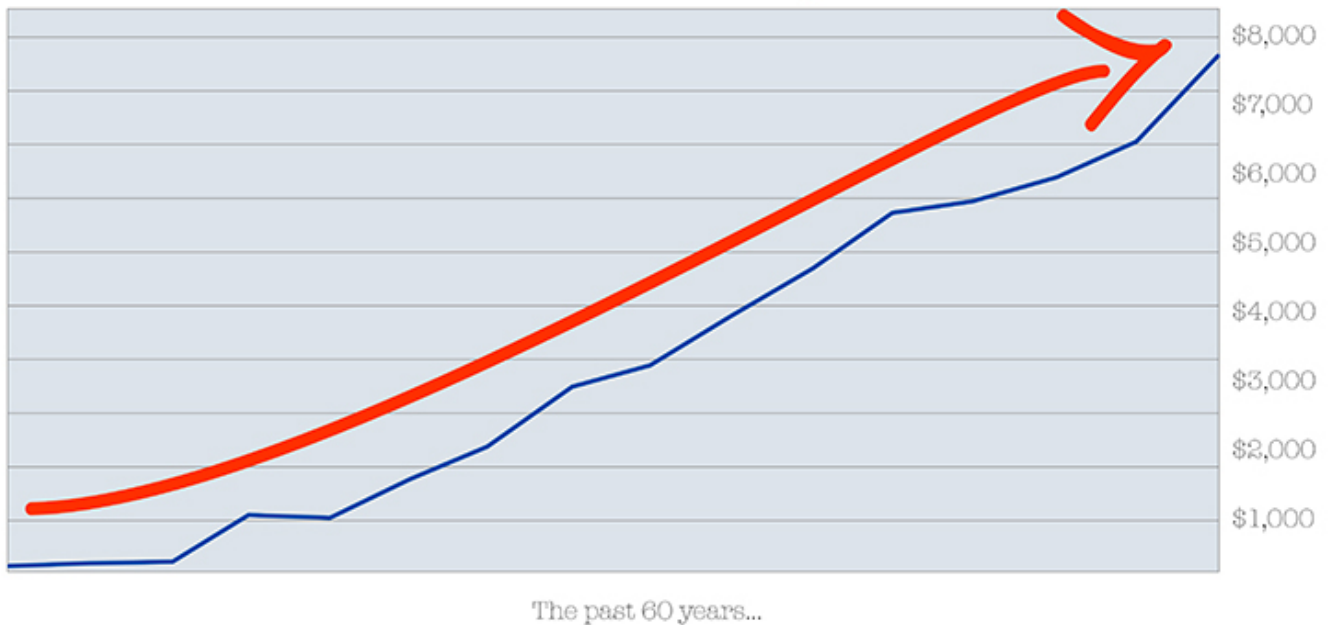

If nothing else, please at least take 2 minutes to read up on this last point...

Even if you're not planning on traveling anywhere soon.

You see, this alternative asset—not gold, silver, or any other type of coin or collectible— lets you store between \$7,000 to \$20,000 in the front pocket of your Levi's jeans.

On top of that, its value has never gone down in the last 60 years... growing at more than twice the pace of inflation!

The Asset That Only Goes Up!

Check it out.

(It's pretty to look at, too. You'll enjoy having it, even if you don't need to take it across borders.)

That's why I believe ***Surviving Fedcoin*** is unlike any book you've ever come across before.

It helps you "bulletproof" your digital life and also shows you how to both protect (and grow) your hard-earned money.

For those reasons, it's especially vital if you're at—or near—retirement.

In addition, the book reveals...

- **The four most dangerous investments in America today (Page 29)**

Do you own any stocks or mutual funds? If so, there's a good chance you own *at least one* of these four deadly investments. In fact, one of these has already dropped 60% since we warned our readers about it several months ago...

- **The “crash-proof” portfolio (Page 43)**

Don't let another '08 screw up your retirement. Here's how to make sure your nest egg survives the next crash intact.

- **The best “currency” to have in times of crisis—own for as little as \$4! (Page 67)**

I recommend you get *at least a few hundred-dollar's worth* of this “currency” as an insurance policy if (and when) things get crazy...

- **How to save up to \$25,000 with a single phone call (Page 41)**

This one phone call is *crucial* if you own stocks—It could prevent \$25,000 from being accidentally “erased” from your account!

You'll find all these secrets inside our newly updated-for-2018 edition of ***Surviving Fedcoin: How to Survive (and Profit) From America's Coming Currency Change***.

To thank you for taking the time to listen to my warning today, I've set aside a FREE print copy of the book for you.

I'll tell you how to get your copy in a minute...

But first, I want to tell you about the totally new chapter we've put together.

It covers the single best way to profit from the coming crypto ban...

The “Missing” Chapter: The Best Way to Profit from the Coming Crypto Ban!

As I mentioned before, governments want to usurp cryptos and make them “their own” in part because they love the technology behind crypto...

The blockchain.

And, while I’m not a fan of the crypto “coins,” blockchain technology IS real and IS here to stay.

Put simply, the blockchain is a faster, better and cheaper way to track stuff than the way it’s done today.

And while that might sound boring, it’s already minting millionaires as we speak and revolutionizing entire industries...

For example, I mentioned earlier how Wal-Mart is using the blockchain to cut down its tracking times by 99.9%...

But they’re not the only ones...

In real estate, the blockchain will save millions of home buyers several hundred dollars by replacing the outdated title insurance system.

In healthcare, it’s helping secure patient records...

And, in banking, it could cut down the time it takes for checks to clear from days to minutes.

(In fact, Mastercard has already patented blockchain technology for instant payments.)

Research firm Gartner projects Blockchain will add \$3.1 TRILLION to the economy by 2030.

\$3.1 Trillion by 2030

Source: Gartner, Inc.

That's why... *while I've never purchased a single crypto "coin"...* I did invest in a promising blockchain start-up a year ago.

Since then, my money has already multiplied 150 times over.

But that's just one of the available blockchain plays out there...

As this trend accelerates, there will be more and more of these companies that "shoot to the moon."

In our new bonus chapter, which we call ***The Best Way to Profit from the Crypto Ban Today***, we've identified the 3 best blockchain investments available right now.

These are the surest bets I know of that can let you double (or even triple) your money over the next 12 months.

One of these is reshaping the \$1.8 trillion real estate market and has been on a real tear lately...

Another will be a MAJOR winner as Trump repeals the Obama-age Dodd-Frank regulation...

And the last of these 3 plays is a powerful, yet little-known stock I can guarantee you've never heard of (but will soon want to add to your portfolio).

With any of these investments, you won't get the psychotic price swings you see with Bitcoin and the other cryptos.

This is how professional investors and billionaires are secretly playing the crypto trend today.

I recommend you check it out.

On top of that, inside this chapter, you'll also discover the 2 most exciting "private" blockchain companies that could IPO as soon as January 1, 2019!

(I called in a favor and talked to a Silicon Valley friend of mine who runs a \$160 million fund. These are the top 2 picks on his list...)

In addition, we'll also reveal the single biggest blockchain "scam" to avoid right now.

This exact same thing happened 20 years ago during the internet boom—to *the detriment of thousands of investors...*

And now it's happening again.

Don't be one of the many investors who will get fooled.

Altogether, this "chapter" represents hundreds of man-hours of analytical work.

And it's the type of research that could easily be sold by some Wall Street firm or hedge fund for thousands of dollars...

That's why we can't include this chapter— ***The Best Way to Profit From the Crypto Ban Today***—inside the main book.

It's just too valuable...

If we were to sell this "chapter" on its own—we'd have to charge *at least* \$199 for it.

But we're not going to do that...

Thanks to a special arrangement, we've figured out a way you can get this special bonus "chapter"... along with your print copy of the ***Surviving Fedcoin*** book...

Absolutely free.

Here's the deal...

The Most Unusual Group on Earth

Earlier, I mentioned I belong to a private group of financial “watchdogs” with over 2 million subscribers.

It's actually the largest independent network of financial publishers in the world.

The name is hardly known except to financial insiders:

The Agora.

In Ancient Greece, the Agora was the place where business people came to exchange goods and intellectuals came to discuss ideas.

The association is not accidental.

Agora's founders are big believers in freedom:

Freedom of speech, freedom of trade, and the freedom to make and safeguard one's wealth without government interference.

Our research reflects those ideas.

Today, if you walk inside any of our buildings, it might surprise you to see the types of people who work for us:

- 9 authors whose works have topped charts at *The Wall Street Journal*, *The New York Times*, Amazon, and *Business Week*...
- An epidemiologist and Senior Investigator at the National Cancer Institute...
- A reclusive economist with houses on three continents (including a castle!) rumored to be a billionaire...
- A former 3-term congressman from Maryland.

And because we're not bound to any political party, we're not afraid to speak the truth—even when it is unpopular...

That's why we've been able to predict so many of the "surprising" financial and geopolitical events that have shaped the last four decades...

From the crash of '87... to the dot-com bubble... the real estate bubble... 9/11... president Trump's victory... and the rise of state cryptos...

We nailed each and every one of those predictions.

And I've had the opportunity to work directly with three men central in our network, including founder and 3-time best-selling author Bill Bonner.

That's why I've been tasked with heading up **Strategic Investor**, our premier monthly bulletin for profiting from world trends over the next 6 to 18 months.

You see, our service is part of one of the several independent publishing groups that make up our network.

At **Strategic Investor**, we specialize (and focus on) what the mainstream media is missing... *and show you how to profit.*

Like the blockchain opportunities I mentioned earlier...

I've been telling my readers about this for months now.

And they've already seen significant double-digit gains.

But that's just a small part of our work...

We help you profit. But we also show you how to protect your money.

In fact, right now, there are a couple popular investments out there that are financial suicide...

One of them being index funds.

Almost everyone in the market has some money parked here. But they're in for a rude awakening...

Tech stocks, too, have risen to ridiculous levels.

(Don't expect market "darling" Amazon to keep making new highs, either...)

Every month, you get the truth.

We'll send you the best ways to keep your money intact and profit from the trends we see playing out.

And, of course, we'll also keep you abreast of all the latest developments going on in the ongoing "wars on cash and crypto."

Simply put: **Strategic Investor** is your 1-step solution to keeping your money intact and growing it for the future.

Here's another report we recently put together I think you'll enjoy...

A Legit (Non-Crypto) Shot at 1,000% Gains?

Listen...

What do you think will happen once all those crypto holders head to the exit gates at the same time?

A lot of these people are self-professed libertarians and hate the government.

That means there's going to be a natural exodus towards gold...

And, more specifically, high-octane gold stocks!

Consider:

Almost no one today is happy with "safe" 5 to 10% gains...

They've all been hoodwinked by huge crypto returns...

And when the crypto party ends, these partygoers will still want to get "high."

Enter small gold and silver stocks...

These are just about the only things NOT in a bubble right now.

I guarantee that will all change once the crypto ban hits...

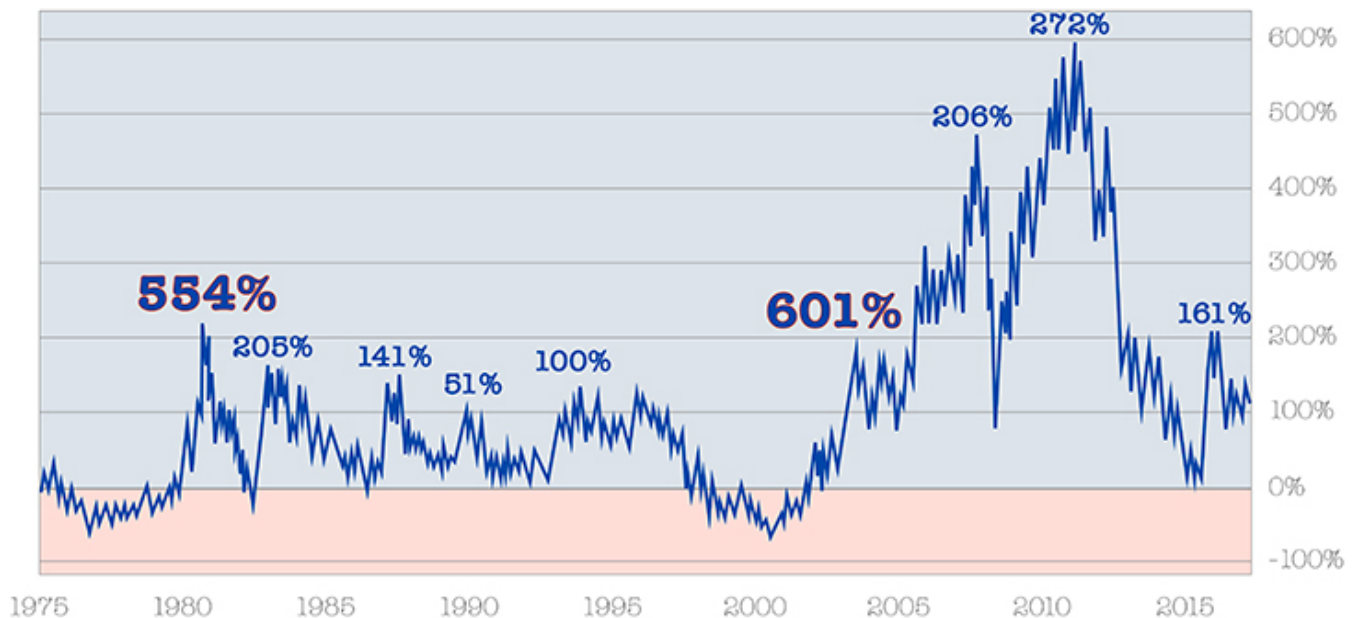

A flood of new money will go into these stocks.

And we'll see this sector soar up to 500% or more...

Just like it's happened on multiple occasions in the past.

And with the right pick, carefully selected, you could be looking at gains of 1,000% or more.

Gold Stocks Set to Explode Again?

Right now, we're at the start of a multi-year bull market in small resource stocks.

And we've written down everything you need to know about this opportunity in a special report called:

The 1,000% Secret: How to Take Advantage of the "Speculation of the Century."

Inside the report, you'll get the name of the 5 best small gold and silver stocks we've identified...

Right now, all five of these picks are priced under \$10.

But this won't last long. Because each of these stocks has the potential to shoot up 500% to 1,000%.

Now, a word of warning:

This isn't for your "can't lose" retirement money...

These stocks ARE highly risky and volatile.

And, once they go up a bunch, **we WILL recommend you take profits.**

But if you have a couple hundred to throw into each of these picks and things go like I think they will...

Well, let's just say I believe you'll see "crypto-like" gains on at least one of these stocks.

Will You Accept This Free Offer?

I'd like to send you all the resources I just mentioned...

... including our report on small gold stocks... our ***Surviving Fedcoin*** book and the special bonus chapter on the blockchain plays...

Absolutely free.

All I ask in exchange is you give our ***Strategic Investor*** newsletter a try.

Each month, we'll send you a completely new recommendation.

We'll explain why we believe it's a good idea... why it's set to benefit from a particular trend we're following... as well as the potential pitfalls.

We won't send you ANY recommendation until our full team of analysts has vetted it and I've personally signed-off on it.

Also, you don't need to be a professional investor to follow our work.

Our goal is simple:

To help ensure you make as much money as you can... as quickly and safely as possible.

We're not trying to impress you with fancy jargon.

Also, we make it easy to follow our recommendations.

If you have a standard brokerage account, you can profit from our work.

But before you get started, there are two other valuable reports I want to send your way:

- ***The Cheapest Legal Way to Buy Gold in America Today***

In addition to the gold stocks I just mentioned, I strongly recommend you buy *physical gold and silver*. It's "insurance" and offers you privacy. Inside this report, we share with you an unadvertised website that lets you save up to 87% on premiums. (Please, however, *don't* share this link with non-members. Otherwise, the owners of this site may take it down and close this opportunity.)

Also, just to be clear... this has nothing to do with gold stocks or ETFs. Here, I'm talking about real, "hold in your hands" gold or silver coins for a fraction of the price you'll find anywhere else.

- ***America's #1 Tax Loophole***

The elites will stop at nothing to siphon our money. *Get this...* Last October, 49 different countries agreed to start *automatically* sharing tax information on their citizens between themselves. And this year, another 53 will join in! (They are doing this through a special piece of software.)

Now, look. It *is* possible to drastically cut your tax bill. Almost next to zero. However, it's not easy. In this report, we'll share with you the #1 most

powerful way to legally cut down your taxes in the U.S... without having to start a corporation or having to move to another country.

Altogether, that's \$485 of valuable research I want to send your way today for free!

How to Get Started

The regular price for a 12-month subscription to ***Strategic Investor*** is \$199.

And—as I think you'll agree—it's a real bargain at that price.

However, to make sure this work gets into the hands of as many patriots as possible, I've convinced our publisher to **slash the price by over 75%**.

That means—for literally just pennies a day—you'll have *total* access to all this life-changing work.

But please note this is an introductory offer only...

I can't guarantee how long this offer will last.

Come back tomorrow and you might have to pay full price.

But what I can guarantee is this:

You'll be 100% happy with our research.

Otherwise, just say the word and we'll send you back every penny you paid.

No debate!

You'll still get to keep all the great bonuses... including the 132-page physical copy of the *Surviving Fedcoin* book we're about to ship to your door.

Just consider it our way of saying “thanks” for giving us a try.

All you need to do to get started now is click here.

This will take you to a 100% secure page.

Here, you'll be able to review everything one last time before placing your order.

(You'll also find another secret bonus there I think you're going to love...)

To recap, here's everything I want to send your way today at no-risk to you...

1. **A 12-month subscription to *Strategic Investor*... (\$199 value)**
2. **The newly updated 132-page print copy of *Surviving Fedcoin: How to Survive (And Profit) From America's Coming Currency Change* (\$29.95 value)**
3. ***The "Missing" Chapter: The Best Way to Profit from the Crypto Ban Today* (\$199 value)**
4. ***The 1,000% Secret: How to Take Advantage of the "Speculation of the Century"* (\$199 value)**
5. ***The Cheapest Legal Way to Buy Gold in America Today* (\$29 value)**
6. ***America's #1 Tax Loophole* (\$29 value)**

Altogether, that's \$684 of life-changing research you can get today for under \$50.

It's a no brainer!

Just click on the button below.

Subscribe Now 

And, remember, you don't risk a single penny for giving us a try today.

Alright, that's about it.

Just one last thing before I go...

Please... whether you choose to take advantage of this special offer or not...

Don't let Congress and the global elites control your life.

They already track us (and tax us) nearly to death!

NOW...

... *while you still have the chance to do something about it...*

... is the time to safeguard your privacy and your family's savings.

Once our currency changes it will be too late.

Days from now, Bitcoin and 1,000-plus cryptos will be on the way out.

Cash (in any meaningful way) will soon be gone, too.

And, in its place, we'll be forced to use creepy new "state crypto" money.

This isn't something you want to hold off until the last minute to prepare for...

Don't put your future in the hands of some government bureaucrat.

July 21st is almost here. And, already, 20,000 patriots have taken this initial first step.

Take the steps you need to protect yourself *now*.

Click here to get started.

Regards,

E.B. Tucker

Editor, *Strategic Investor*

P.S. China just announced it's cracking down on ALL cryptocurrencies. And Venezuela and the Marshall Islands have become the first countries to introduce their own state cryptos. Things are picking up speed!

In fact, here's what Argentina's chief central banker said at the March G20 meeting: **"In July we have to offer very concrete, very specific recommendations."** A friend of mine, a leading crypto lawyer who once oversaw the largest Internet IPO in history, told me "there's a 100% chance the regulators will hammer most of the sector."

Even if you're not 100% sure this is right for you, **please at least secure your free copy of the *Surviving Fedcoin* book.** Already, 20,000 patriots have taken this initial first step. And we just finished updating the book for 2018. It's a quick read that could literally save you thousands of dollars not to mention protect your privacy!
