

Re-made in America

Get ready for a new age of wealth and prosperity that puts the
USA back on top!

**If you thought life was good *before*
the crisis, wait until you see
what's set to happen next...**

Dear reader,

Some people have written America off. They say it is past its prime... buried in debt... and will be plagued with unemployment and hardship for years to come...

They're wrong -- and I'm going to show you why.

In fact, this may sound a little crazy, but what if I told you the American dream is not only alive - soon it may burn brighter than ever before...

Paying your mortgage. Finding a new job. Getting a raise. Making money with stocks. Retiring in comfort, and without worry. Treating your family to the life they deserve. I believe it's ALL about to get a whole lot easier -- just like it was before the crisis struck. Perhaps even better.

And that's just the start...

The words 'Made in America' may actually mean something again...

As many as 5 million new manufacturing jobs. The deficit slashed *without* huge tax increases or drastic cuts to Medicaid and Social Security. Businesses -- big and small -- thriving. A flourishing economy. America *back on top* as the world's #1 engine of growth.

As you're about to see, I expect all of this to happen -- *and much, much more.*

This means...

- ✓ Much greater job security
- ✓ Less money spent on bills

✓ Renewed security for retirement

Like I said, it sounds pretty far-fetched, doesn't it...

To be honest, what I'm about to show you is so unexpected -- so *life changing*, many people won't believe it can happen. And they certainly won't believe it has already begun.

Others will hope it's real. But they'll be too frightened to act on it.

And some simply won't catch wind of what's taking place -- or get on board -- until most of the money has already been made.

And that's a real shame because, as you're about to see, they'll be missing out on the opportunity of a lifetime.

You see, the fuse has been lit on a recurring phenomenon that is capable of altering America's fortune -- and your personal wealth -- for decades to come...

The railroad age... the steel age... the electronics age... the technology age -- this phenomenon triggered them *all*.

It has given birth to nation-changing companies like Union Pacific, U.S. Steel, General Electric, Apple, and Amazon. It has turned penniless immigrants and college dropouts like Andrew Carnegie and Bill Gates into billionaires. And, it has generated untold trillions in wealth for American workers -- and main street investors.

Now, this powerful phenomenon is taking shape again. And as I explained earlier, it's not some far off event. It's already starting to happen...

Just ask Bobby B. of Dimmit County Texas. He bought his wife a new pick-up truck with all the unexpected money he's suddenly making.

And his neighbors can't get over *their* good fortune either...

Three years ago the U.S. Census Bureau pegged Dimmit County as the 19th-poorest county in the nation. Today it's overflowing with jobs that are paying out more than \$3.1 billion in salaries and benefits.

Today it's overflowing with jobs that are paying out more than \$512 million in salaries.

What's behind this amazing reversal? I'll show you in a moment.

But first, it's important to know that this isn't limited to just Dimmit County...

Desoto Parish in Louisiana is also on its way from being one of the poorest parishes in its state, to one of the wealthiest...

As Jim May, executive director of Desoto's Chamber of Commerce explained, "It's affected every business from restaurants and grocery stores to dry cleaners and motels...

Tax revenue has increased. This affects everything from the quality of our roads to the libraries and everything in between."

Sherriff's Sgt. Daniel J. made \$320,000 in a single week from the wave of wealth I'm about to show you. And many of his neighbors have made even more.

Youngstown, Ohio is already seeing the change as well...

For what seemed like an eternity, Youngstown was the poster child for the Rust Belt economy. Its once vibrant factories and mills sitting silent and slowly crumbling to dust...

Today it's buzzing with the sounds of heavy, new construction and a click-clack of train traffic that hasn't been heard in decades.

And this is just the start...

I believe it will ignite *an entirely new era* in U.S. history -- one that will be looked back upon as a great *rebirth of America*.

For you and me, that means a once-in-a-lifetime chance at riding the next huge new wave of wealth creation...

“I’ve never been more certain of anything in my life!”

Hello, my name is Byron King.

As a Harvard-trained geologist, I got my start manning oilrigs and discovering new deposits for Gulf Oil Company, now a part of Chevron.

As a U.S. Navy flight officer, I racked up 1,200 hours of flight time in tactical jets... made 127 carrier landings... and served as aide to the U.S. Chief of Naval Operations.

And as the editor of ***Outstanding Investments***, I've been a guest speaker on *MSN Money*, CNBC's *Squawk Box*, and Fox Business News...

I've discussed U.S. and global energy trends with Larry Kudlow and Glenn Beck...

And I've had the honor and privilege of helping my readers empower and enrich their lives in a way few other newsletters can.

In fact, just this past year ***Outstanding Investments*** was ranked #1 for 10-Year return by *Hulbert Financial Digest* -- the renowned independent authority on investment newsletter performance.

In other words, I've spent over three decades working around big resources, big systems, big technology, big policy, and big money.

And yet, throughout all 37 years of my experience, I have never seen a world-changing event like the one set to erupt this spring.

I'm talking about a shift in global energy trends -- a resurgence of U.S. energy -- so *immense*, it will change our nation in a way few people thought possible...

Foreclosures and food stamps will gradually fade... new jobs will be created... business will thrive... wages will likely skyrocket... families will prosper - the entire American economy could be transformed.

It will improve *every* facet of your life: Your income... your savings... your taxes... your retirement fund... where you shop and what you buy... the meals you eat... what type of car you drive... where and how often you vacation -- *all of it*.

And, if you take advantage of what you're about to see, it may even make you wealthier than you might have thought possible -- especially after the economic nightmare we've just been through...

Make no mistake, **I'm convinced this profound rebirth of American energy will happen.**

I have never been more certain about anything in my life.

The weak economy can't stop it. As you're about to see, it'll be revitalized by it...

Government regulation and bickering politicians can't stop it. In fact, they secretly *want* it -- it's the answer to their prayers...

Not even OPEC, die-hard environmentalists, or a European banking catastrophe can stop it. It would be like trying to stop the sun from rising...

It has nothing to do with solar power, geothermal energy, or wind.

And it certainly has nothing to do with some wacky, over-blown, subsidy-driven substitute like ethanol or biofuel...

I'll reveal how I know this rebirth is going to happen.

I'll reveal which fuels are driving it forward.

I'll show you *why* it can't be stopped.

I'll show you why it has the power to change your life and put America back on its feet.

And I'll show you why you'll have the chance to make a ton of money *if you act on it now, without delay.*

Then, you can decide for yourself if it all makes sense or if you think I'm just some crackpot who isn't playing with a full deck.

As for me, I'm going to ensure my readers know how to grab the most explosive, life-changing opportunities this tidal wave of change has to offer.

The driving secret behind America's comeback

Why am I so sure we are on the verge a profound rebirth of U.S. energy?

Well, it's not because of the recent discovery of the Bakken oil shale in North Dakota... the Marcellus gas shale in Pennsylvania and New York... or the MUCH larger Utica gas shale laying 5,000 feet below the Marcellus shale...

This is something far, far bigger than any single, new resource discovery.

"...is a development that holds profound implications for the economy of the US and its status as superpower."

- Financial Times

It's a natural phenomenon so powerful it has repeatedly altered history...

And yet so subtle it usually reaches a crescendo before most people even realize the significance of what's taking place.

This recurring event can most easily be described as **convergence**.

Discovery. Technology. Demand.

When these three *specific* ingredients combine they almost always ignite an historic era of growth, wealth and prosperity.

Take a close look at any age of abundance the U.S. has experienced -- or any nation for that matter -- and you'll see exactly what I mean...

America's first steam locomotive -- *technology* -- made its appearance in 1829, followed by the first successful U.S. railway in 1830.

Vast riches of gold, timber, and farmland were *discovered* beyond the Mississippi in the 1840s.

And by 1850 hundreds of thousands of pioneers and fortune seekers were clamoring for a safe, fast, reliable way to make their way west -- *demand*.

The result: The age of rail was born and the economy took off like a rocket.

America quickly transformed itself from a nation of farmers to an urban, industrial nation...

Massive amounts of remote land and new resources were opened up.

Sleepy little towns like Atlanta, Chicago, Billings and Dallas grew into bustling cities almost overnight.

New factories and countless new jobs sprouted up like wildfire.

The growth fueled *new* industries such as steel, telegraphy and civil engineering.

The standard of living rose.

And, for the next 23 years -- despite the turmoil leading up to, and the daunting recovery from, a tragic civil war -- America continued to grow and prosper like never before.

In 1865 convergence struck a second time -- and American prosperity soared even higher...

Henry Bessemer's recently discovered process for making steel from pig iron was paired with the newly patented open-hearth furnace. Together, this combination of discovery and technology lowered the cost of steel 82 percent.

Meanwhile, the need for more rails... bigger bridges... taller buildings... and industrial steam engines and machinery all drove *demand* for steel through the roof...

The Second Industrial Revolution roared to life and America's businesses -- and its people -- thrived.

Cities grew. Skyscrapers began to be built. Mass production and radical new modes of transportation were made possible. And millions of new jobs were created.

Between 1870 and the start of World War I Americans experienced their greatest period of economic growth in history.

In 1947 the convergence of discovery, technology and demand brought America prosperity for a third time...

Physicists at Bell Laboratories discovered the point-contact transistor. Within five years it gave rise to semiconductors and solid-state technology and sparked the electronics age.

People listened to Elvis Presley on their car radios... watched JFK debate Nixon on affordable new TV sets... and balanced their growing checkbooks with pocket calculators.

Workers across the country earned a solid, honest wage in the burgeoning new electronics industry.

Silicon Valley was born...

And, in the months and years that followed, investors had the opportunity to make a mint with stocks like RCA, Texas Instruments, and IBM.

America not only thrived -- with the new technology it put men on the moon!

And of course I'm sure you clearly recall the birth of the technology age...

Personal computers and the Internet. Newly discovered, user-friendly operating systems and web browsers. And an insatiable demand for information, communication and convenience...

“the economic equivalent to any of the big technology innovations.”

- The Wall Street Journal

In the 80s and 90s they all converged to set off an era unlike any other.

Even now -- after 20 years, two wars and a financial crisis -- it's still changing our lives for the better...

Finding the exact book, coffee maker, or pair of shoes you want... for the best price available... and having it delivered right to your door *from anywhere in the world* -- all with the click of a mouse.

Sharing photos of your children and grandchildren on Facebook...

Watching your favorite movies or surfing the web on your iPad...

There's no end to how much easier and more rewarding the technology era has made our lives... how many jobs it has created... or how big a role it has played in keeping our economy humming.

And there is absolutely no question that it has given all of us greater opportunity, greater convenience and greater wealth than we would have had without it.

In fact, there's no question that the *convergence* of discovery, technology and demand has launched our nation into prosperity in *each* of these historic eras.

Now, it's about to happen again...

A wellspring of recently discovered 'unconventional' energy has lit the fuse on a NEW wave of convergence.

And you're not only about to see why it has the ability to make the words 'Made in America' mean something again...

In just a moment I'll also show you three specific ways you can try to profit from it.

FOUR Saudi Arabias buried in our own back yard

Look, it's no secret that several significant 'new' oil and natural gas deposits have been discovered across the U.S. recently...

I'm sure you've heard about these shale finds on more than one occasion over the past few years...

The Eagle Ford shale deposit... the Bakken shale... the Haynesville and Fayetteville shales... the Marcellus and Utica shales.

The list seems to grow every few months...

Just this past summer the Niobrara shale started making headlines -- adding Colorado, Nebraska and Wyoming to the list of states rich in deposits.

What few people realize though is these are not 'new' discoveries. Geologists have known about most of them for decades...

The REAL discovery that has reignited the phenomenon of convergence is actually twofold...

First, geologists have only recently begun to realize just *how much* raw resource each of these deposits actually holds.

They are called 'unconventional' or 'tight oil' and 'tight gas' deposits for a reason.

Traditional oil and gas deposits were essentially large pockets of oil or gas that were easy to spot and easy to harvest. You would basically use magnetic or seismic surveys to locate a large anomaly underground. Then sink a pipe down into the ground so the oil or gas could gush out under its own pressure.

Yes, that's an over simplified explanation but you get the idea -- geologists looked for underground pools of fluid.

With shale deposits there are no pools. The oil and gas are trapped in tiny crevices between dense layers of shale and sedimentary rock -- kind of like a thin layer of mayonnaise between two pieces of bread.

Because the crevices are so thin, so numerous, and contained in such immense formations of sediment and rock, the technology to accurately measure it simply didn't exist -- *until now*.

In 1974 geoscientists estimated the Bakken shale was capable of generating just 10 billion barrels of oil. Barely enough to satisfy current U.S. oil consumption for more than one year...

In 2008 the North Dakota Department of Resources reported the Bakken contained 167 billion barrels of oil -- nearly 17 TIMES more than previously believed.

At our current rate of consumption, that's enough oil to last us 23 years -- *from just ONE shale deposit*.

As recently as 2002 it was estimated the Marcellus shale contained about 2 trillion cubic feet of gas -- barely enough to last the U.S. for one month.

Today the Energy Information Administration estimates it contains at least 141 trillion cubic feet of recoverable natural gas -- 70 times more than previously believed.

That's almost 6 years' worth of natural gas -- the cleanest burning fossil fuel on the planet -- from just ONE shale deposit.

And in 2009 no one thought the shale beneath Dimmit County, Texas was worth anything more than dirt...

Now -- in just a little more than 3 years -- over 66 million barrels of oil have already been pumped out of the Eagle Ford shale. Well permits have soared from 94 to 6,910 -- with as many as 30,000 expected before the play matures. And 48,000 jobs have been created.

Well permits have soared from 94 to 1,010 -- with as many as 30,000 expected before the play matures.

And 12,600 jobs have been created.

There's just one small problem though...

The discovery of all this 'new' oil in the Eagle Ford shale may be improving lives in Texas. But it hasn't done much to improve the lives of people in Michigan or New Hampshire.

Likewise, the discovery of 410 trillion cubic feet of natural gas in the Marcellus shale may have lit western Pennsylvania's economy on fire...

...but it hasn't enriched the lives of people in Arizona or Florida.

And the discovery of the Haynesville and Utica deposits may be making energy companies a fortune. But it hasn't delivered much money for main street investors...

In just a few more months though, I believe it will!

As I said earlier, no single shale play is a game changer. No single discovery has the magnitude or ability to drastically alter the face of our nation...

But their *combined discovery* DOES.

Independent research studies and industry insiders report that the *combined* shale deposits can supply America with a century worth of natural gas.

And the Institute for Energy Research now pegs the total recoverable oil from U.S. shale deposits at as much as 1 trillion barrels -- nearly FOUR times the amount of proven oil reserves in Saudi Arabia.

Does this mean your energy investments will soar? If you choose the right ones, it could. I'll reveal my three favorite ways to go for maximum gains with you in just a moment...

Does it mean more jobs and a faster economic recovery? It sure does. Their *combined discovery* has already set a new wave of convergence in motion...

...and you won't believe some of the life-changing stories you're about to see.

“The American phoenix is rising again. Within five years or so the US will be well on its way to self-sufficiency in fuel and energy. Manufacturing will have closed the labour gap with China in a clutch of key industries. The current account might even be in a surplus.”

- The Telegraph

Does it mean we'll reach \$30 oil again?

No, in that sense we *have* reached peak oil.

You and I both know the days when you could simply shove a pipe in the ground and watch oil gush out under its own pressure are gone.

As fate would have it though, it turns out that may actually be GOOD news for us...

Why?

Well, let's face it -- most of America's 'easy' oil has already been found.

And if oil companies still had access to massive deposits of easy oil *outside* of the U.S., they wouldn't have had any reason to search for 'unconventional' oil or gas *inside* the U.S....

Fortunately, the scarcity of easy oil -- and the threat of peak oil -- DID create the need to take a closer look at unconventional resource deposits.

And look at what they've found...

Massive, secure sources of oil and gas right at our fingertips. Enough to power America for up to a century at current consumption rates.

In other words, this could mean no more price spikes every time a hurricane strikes, China gets thirsty for crude, or OPEC tries to tighten the spigot...

And no more reliance on Middle East kings or unstable nations for the bulk of our energy needs.

Prices are likely to remain much more balanced and affordable for years to come.

Just as importantly though, it also means a much stronger, more vibrant economy than we've seen in a *very* long time...

“We actually have more jobs than we have people”

Look at Dimmit County – you know, the one that went from being 19th poorest in the nation to taking center stage in a \$3.1 billion job boom...

Since it started pumping oil 36 months ago its unemployment rate has fallen in HALF. And sales tax receipts shot up 70 percent in one year – allowing the county to hire more police officers and buy sanitation and road repair equipment. “That’s oil money”, Bobby B.told reporters pointing to his wife’s new pickup truck. “Oil money just makes life easier.”

Ruby Smith has been floored by the change as well...

“Pays great, it’s a lot. Don’t need no man to take care of me,” she laughed.

Stories like these are popping up in other shale areas as well...

Thanks to the Haynesville shale, residents in Louisiana's Desoto Parish have made a fortune off of leasing payments alone...

As Sgt. Daniel J. put it, "God blessed everybody living around here. There is no way else to look at it."

Remember, he made \$320,000 in a single week -- enough to put all of his children through college.

Hannah B.'s restaurant is constantly packed for both lunch and dinner by hundreds of hungry workers...

And residents are seeing their lives improve in all sorts of ways: A new town hall... resurfaced roads... a flood of new customers filling the cash registers of local stores and restaurants... long-needed pay increases for community employees...

Are you beginning to understand why this has me so excited?

Are you starting to see just how powerful -- and profitable -- this new wave of convergence will be...

In North Dakota 'Help Wanted' doesn't even begin to describe the explosion of economic activity taking place...

The Bakken oil shale is transforming sleepy towns across the grasslands into thriving centers of growth.

The state already boasts the nation's lowest unemployment rate -- 3.5 percent...

And companies are scrambling to fill all manner of jobs in order to keep pace with the crude: Truck drivers, construction workers, policemen, waitresses, you name it...

As Dennis Johnson, Mayor of Dickinson explained, "We have rising property values. We have low unemployment. We actually have more jobs than we have people."

In fact, because of the drilling boom, the recession is pretty much non-existent in North Dakota.

The state even has a budget surplus...

So much so, they've been able to *boost* state spending while also enacting a \$500 million tax cut for its residents.

And those are just examples from THREE shale deposits!

There are currently more than 27 oil and gas shale deposits being aggressively developed across the U.S. ...

...and they cover nearly ONE THIRD of the nation.

Some span as many as six states!

Just think of what will happen as the activity at all 27 shale zones floods into the larger economy...

Think of the impact it will have on your job... your income... and your life style...

With explosion of jobs, rising wages and growing businesses, state and federal revenues will likely skyrocket...

Rising government revenues could curtail the need to increase taxes or drastically reduce Social Security and Medicare programs...

Lower fuel and raw material prices mean manufacturing and transportation costs will drop...

In turn, food and goods will cost less. Consumer spending will rise. And our economy will grow stronger by the moment.

And the more the cycle spreads the more it will feed on itself.

All told, Boston Consulting Group – one of the most prestigious consulting firms in the world – expects 800,000 manufacturing jobs to return home to the U.S. by 2015 – with a multiplier effect creating anywhere from 2.5 to 5 million new jobs by 2020.

THAT is the power of convergence. THAT is why I believe the rebirth of U.S. energy will make the words “Made in America” mean something again...

And that is why I believe we’re about to experience a new era of prosperity.

Your job will be more secure. Your commute will cost less. You’ll be more likely to get a raise. Your taxes will be far less likely to go up. Your grocery bills will go down. And your utility bills will shrink.

You’ll have more spending cash...

Which means you’ll be able to treat your spouse to dinner at fine restaurants more often. Help your children with college. Or spoil your grandkids silly at Christmas.

It will cost you less to travel and you’ll have the cash to travel more often...

And, as you’ll see in a moment, if you invest in the right energy companies you’ll have the potential to make a boatload of money.

Of course, none of this would be possible without the next key ingredient for convergence: Technology.

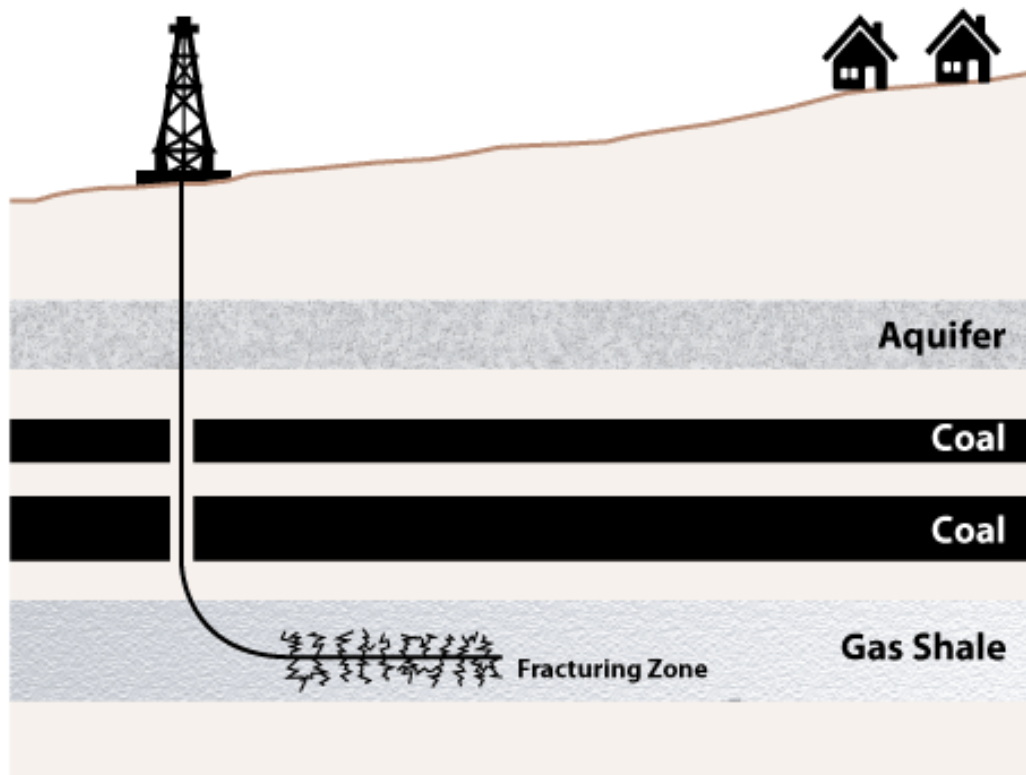

“One of the greatest wealth creators in American history”

If you’ve been reading the headlines or watching the news you’ve probably heard two important phrases: Long-reach horizontal drilling. And hydraulic fracturing -- or *fracking*.

Long-reach horizontal drilling allows drillers to bend a well 90 degrees within just a few feet -- sending wellbores up to a mile sideways after reaching down more than a mile below the ground surface.

And hydraulic fracturing is the process of injecting fluid into a wellbore under high pressure to create or slightly expand small fractures in the stone.

Since the fluid is 98 percent water and sand, the water carries the sand into the cracks. The sand then holds the cracks open so the oil or gas trapped between the rocks can flow out.

In other words, horizontal drilling allows drillers to get down to the narrow shale layer, then turn horizontally so they can follow it...

And hydraulic fracturing let's them pull out the oil and gas trapped in its cracks.

Together they're perfect for tapping into the massive volumes of fuel America just recently discovered it has...

And together they're igniting an energy revolution that's changing U.S. oil and gas output in way few people thought possible.

America's dependency on foreign oil has already dropped below 50 percent for the first time in 15 years -- and yet shale oil production has barely gotten underway...

Annual U.S. Field Production of Crude Oil

Source: U.S. Energy Information Administration

What's more, the Energy Information Administration reported that U.S. crude oil output has actually reversed course and made its biggest *RISE* since 1985.

And industry insiders now expect North American oil production to reach an *all-time high* in 2016. Yes -- we're talking even greater oil output than during the historic oil boom of the 1940s, 50s and 60s.

The same rapid-fire growth is occurring with shale gas as well...

Shale gas production has already pulled the U.S. out of a domestic natural gas shortage.

It has lowered the price of U.S. natural gas by 54 percent in less than a year.

And it has cut U.S. imports of nat gas to just 13 percent of supply.

Yet, we've only tapped into a *fraction* of its full potential...

Just wait until all of this new oil and gas production kicks into high gear!

Better still, wait until you see the kind of profit opportunities it can hand you...

Jefferies & Co. – a major industry analyst and advisor – recently declared the oil and gas shale boom will be recorded as “one of the great wealth creators in American history”.

Government advisory group IHS CERA stated, “This is very big and it’s coming on very fast. This is like adding another Venezuela or Kuwait by 2020, except these tight oil fields are in the United States.”

The *Financial Times* declared America’s newfound oil rush “...is a development that holds profound implications for the economy of the US and its status as superpower.”

Investment banker Ralph Eads was quoted in the *Wall Street Journal* describing it as “the economic equivalent to any of the big technology innovations.”

One of the UK’s preeminent newspapers -- *The Telegraph* -- announced, “The American phoenix is rising again. Within five years or so the US will be well on its way to self-sufficiency in fuel and energy. Manufacturing will have closed the labour gap with China in a clutch of key industries. The current account might even be in a surplus.”

And Goldman Sachs even expects America to jump ahead of Russia and Saudi Arabia and reclaim its title of World’s No. 1 Energy Producer by 2017!

Why are they all so confident this new U.S. energy boom will put America back on top and change the world for years to come?

And why am I so certain that - if you act now - it could change your life in ways you never thought possible?

Because of the third and final ingredient in convergence: Demand.

Not even bickering politicians can stop it! In fact, they'd kill for a chance to take credit for it...

Demand has not only converged with discovery and technology to ignite a new era of American prosperity...

It is also the ingredient that makes this wave of change virtually unstoppable.

Two world wars. The Great Depression. 32 bear markets. 20 recessions. The tech bust. The real estate bust...

None of them has been able to put so much as a dent in the world's insatiable, ever-expanding appetite for fuel.

And that certainly isn't going to change now!

The weak U.S. economy won't stop it. In fact, as you've just seen, it just might be saved by it.

Regardless of how tight money might get, people still need to heat their homes and turn on their lights.

They still need to run their refrigerators... their air conditions... their TVs... and their PCs.

And they still need to drive to work... to school... and to the grocery store.

When times get tough, energy is one of the few industries that keeps on humming -- and even has the ability to *grow*.

Ah, but what about pandering politicians and government regulation?

Sure, they may slow the pace a bit now and then with an occasional speed bump -- such as rerouting a major pipeline or delaying its approval...

But stop it outright? Not a chance.

Why?

Because, whether they openly admit it or not, they both want and need it.

For more than three decades now -- ever since the Arab oil embargo -- American citizens have been pleading with their leaders to find a way to end our reliance on Middle Eastern oil.

September 11th... the war in Iraq... and the Arab Spring revolutions have made it more than clear that time is running out -- and the cries for energy independence are getting even louder...

Do you think any politician in his right mind would risk his career by standing in the way of our finally achieving it?

For that matter, I can't think of a single politician who wouldn't jump at the chance to claim responsibility for freeing us from the shackles of foreign oil -- *and* giving us millions of new jobs in the process, can you?

As for OPEC, fanatic environmentalists, and European financial catastrophe -- they haven't got a snowball's chance in Hades of stopping it either...

For starters, 77 percent of the world's known shale oil resources are located within the United States. So, there is no way OPEC can lay claim to, or control it.

Instead, they'll probably be forced to lower their prices *just to compete with it*.

Likewise, if two world wars, dozens of recessions, and a Great Depression couldn't quell the world's growing hunger for fuel, then I highly doubt a few crazed environmentalists can stop it either...

At most, their efforts will merely bring greater awareness, improvement, and safety to process -- which is good for energy companies and consumers alike.

And if financial crisis roils Europe?

Well, it'll be no different than in the U.S....

Regardless of how tight money might get, Europeans will still need cars, buses, and trains to get to work.

They'll still need power for their refrigerators, TVs, and computers.

And they'll still need to cool their homes in the hot, European summers and heat them in the freezing, European winters.

And where you do think they'd rather get the fuel to do it...

From Russia -- who has already shut off the spigot three times in the past six years?

Or from America -- a longtime friend and ally...

Besides, even if crisis does slow things a bit in Europe, the thirst for fuel in emerging nations will more than fill the gap.

Whether it's natural gas shortages in China... an ongoing energy crisis in India... or long lines at gas stations in Argentina -- they can't get their hands on fuel fast enough.

In other words, demand may slow briefly in one country or another from time to time...

But, worldwide, over the long run it always has -- *and always will* -- continue to climb at a rapidly increasing rate.

It all boils down to simple mathematics...

You and I both know that long as the world's population continues to expand, the amount of energy consumed will continue to expand right along with it.

And now that same insatiable demand is converging with discovery and technology to launch us into a new era of growth...

...just as it has in every other age of wealth and prosperity throughout history.

If you want to maximize your chance to profit, time is running out...

Here's the real kicker though...

As you've seen, the media is starting to catch wind of what's going on...

They're already calling it "an historic shift"... the harbinger of an "economic revolution"... and printing headlines like, 'World Power Swings Back to America'.

Energy companies and industry insiders obviously know what's going on -- and realize how big its impact is going to be...

Otherwise, they wouldn't be pouring billions of dollars -- and every possible ounce of effort they can muster -- into recovering all these newfound resources.

And there's no doubt the Wall Street elite have noticed what is going on -- and are *already* positioning themselves to their advantage...

If Goldman Sachs expects America to reclaim its title of No. 1 Oil Producer by 2017, do you really think they'll pass up the chance to make money on it?

And if they're putting money on it, it's a pretty safe bet their competitors are too.

However, one group of people *hasn't* taken notice of what's starting to happen -- *at least not yet*: the American public.

Have you heard anyone at Starbucks chattering away about the Utica shale -- or the steel mill rebirth it has ignited across Ohio?

When you last dined out, did the waiter talk your ear off about the Bakken shale or how it has lifted North Dakota out of recession?

And how many of your friends and neighbors are talking about the wonderful, shocking news that America may once again be the world's top oil producer -- *within the next five years*?

Not many, right? But you can bet your bottom dollar they soon will be...

When?

Mark my words - it won't be long before mainstream America will find it self caught up in a growing wave of oil headlines... the start of a profound economic recovery... and an energy stock euphoria the likes of which we haven't seen in decades.

Why?

Three reasons:

One: Based on my industry experience and today's technology, I would say it typically takes about eight years to go from drilling the first exploration wells to full-scale production.

And when did exploratory drilling at the first major shale plays -- namely Eagle Ford, Bakken and Marcellus -- get under way? In 2004.

So, when are they expected to enter into full-scale production? That's right -- *this year*. They'll be pumping out massive volumes of crude as soon as the 2013 drilling season gets under way.

And when will the 2013 drilling season get under way? You guessed it -- the moment the winter weather breaks: **May**.

Two: Because the jump in last year's numbers confirm they're right on the verge of throwing the floodgates wide open...

North Dakota's Department of Mineral Resources reported that Bakken oil output had shot up 257 percent in the last two years. At Eagle Ford, oil production TRIPLED in just 12 months

while natural gas product more than DOUBLED. And gas production at the Marcellus shale in southwest Pennsylvania also more than doubled over the past year.

Three: Because the sudden, new surge in oil and gas output... new jobs... new factories... and explosive economic activity will no doubt dominate the headlines.

For more than four years all we've heard about are mortgage nightmares... market crashes... rampant unemployment... countries on the brink of collapse... deficits gone wild... and childish political bickering.

People are tired of feeling hopeless and depressed. They're starving for some sort of good news -- a light at the end of the tunnel.

And now that it's finally within sight, you can be darn sure the media is going give it to them.

The Wall Street Journal, the *Financial Times*, and the *Telegraph* won't be the only ones cranking out headlines like those you saw a moment ago.

Soon everyone will be talking about it

As America's oil production starts closing in on Russia's and Saudi Arabia's...

As old businesses take on new life and new businesses start spreading...

And as more and more stories like Bobby's, Ruby's and Dan's pop up nationwide...

...they'll be plastered across the front pages and all over the evening news.

Everyone and their grandmother -- from the waiter at Applebee's to the yoga instructor at the Y - will be talking about it.

And the moment mainstream America *DOES* catch wind of what's going on, all bets will be off...

We will have reached the tipping point.

The snowball of growth will likely become an avalanche of revitalization and change that sweeps across the nation.

Business will boom. Revenue will grow. Incomes will rise. Consumer spending will climb. Stocks will take off. Millions of lives will improve. And the U.S. will regain its footing as world superpower.

Now do you understand why I believe this will be looked back upon as the start of a new age of American wealth and prosperity...

Even if you sit back and do nothing, your life will most likely change for the better...

Your living expenses could be lower. Your paycheck could be more secure. You'll have more spending money. You'll be under less stress. And you'll be able to enjoy yourself more.

Why let it stop there though...

**“already minted a half-dozen new
billionaires – comparable to the riches
brought by the internet.”**

- The Wall Street Journal

As the *Wall Street Journal* recently stated, America's growing shale boom has “already minted a half-dozen new billionaires -- comparable to the riches brought by the internet.”

Energy companies and their CEOs are *already* making gobs money from the rebirth of American energy...

Thanks to lease payments and royalty checks, tens of thousands of farmers and land owners are *already* making a boatload of cash -- as much as \$35,000 a month...

And we both know the big-shot bankers on Wall Street will make an obscene amount of money from it...

So why shouldn't you become a bit wealthier too?

3 Ways to grow your money as America's next cycle of prosperity takes hold

This is your chance to do MUCH more than simply pay the bills and finish with a little extra spending cash...

It's a second chance at the American dream.

We're talking about the potential to remake the savings you lost in the crash... secure your financial future... reclaim your retirement dreams... and live the worry-free lifestyle you deserve.

How?

Well, there are actually *THREE WAYS* you can potentially multiply your money as this rebirth of U.S. energy expands across the nation:

Money Multiplier #1: HOW TO CLAIM YOUR SHARE OF THE SHALE OIL PROFITS

I'll cut right to the chase...

The best way to make quick, reliable gains from the shale oil boom is to invest in companies that are *already* on the front lines. AND, who are directly involved with pulling all the new shale oil out of the ground.

Don't get me wrong -- I'm not talking about tiny exploration companies or penny stocks plays...

You'd have far more fun betting your money at a roulette table in Vegas -- and just as much chance of winning.

And I'm certainly not suggesting you rush out to grab shares of the first big oil company whose name shows up in the headlines...

Just because a major player makes it into news doesn't necessarily mean they're positioned to make -- *or deliver* -- any real money from it.

To go for maximum profit potential with minimum risk you should look for MAJOR companies that have established strong, solid footholds in the shale oil industry.

And you should make sure they in are best position possible to profit from them.

They can be in a position to do the most drilling and pumping...

They can be a major provider of vital equipment, supplies or operational services to the companies that do the drilling and pumping...

Or be they can be a dominant player in the transport of the shale oil that gets pulled from the wells.

And -- regardless of whether they're drilling, servicing, or transporting the shale oil -- they **MUST** be positioned to surpass the competition in that arena for years to come.

I'm not going to go into any more detail than that in this presentation. However, I do explain it in much more detail in my new report: *Back On Top: Seven ways to bank a bundle with the rebirth*

of American oil.

And I'd like to send you a copy free of charge.

In the report I also reveal my seven favorite shale oil stocks. These are companies set to dominate the playing field (*in more ways than one*) for decades to come.

You'll get the full scoop on:

- ✓ Four oil producers poised to lead the field – including one with such a unique advantage in enhanced oil recovery, its shares have already risen 54 percent in 12 months...
- ✓ Two shale oil equipment and service providers so tightly engrained in the shale oil industry -- and so heavily relied upon by the major players, they seem to have nowhere to go but up...
- ✓ Plus an engineering and technology supplier whose professional track record is so stellar, even the top dogs in the industry consider them to be the best. And so do I. If I could hold just one stock in my portfolio for the rest of my life, *this would be the one.*

And this is just the beginning of the money-making opportunities I have for you...

In addition to my seven favorite shale oil plays, I'd also like to send you information on...

Money Multiplier #2: HOW TO INCREASE YOUR INCOME WITH SHALE GAS POWER PLAYS

Making money with high-potential, low-risk investments is great.

But *getting paid* while you wait for your stocks to climb is even better!

And that's where shale gas stocks shine...

With the right shale gas stocks, you can sit back and collect dividends with yields north of 3.5... 3.9... 5.9... 7.1... even 8.7 percent. That certainly beats the pants of the two or three percent you'll get from Treasury bonds, wouldn't you say? And they pay you a heck of a lot more often too!

That certainly beats the pants of the two or three percent you'll get from Treasury bonds, wouldn't you say...

And they pay you a heck of a lot more often too!

Add in the gains you can get from the stocks themselves and you'll see why they make excellent power plays for any portfolio...

In fact, I've uncovered two shale gas plays that have already shot up 20 to 31 percent within four months -- *not including* the dividends they've paid.

And in the months ahead I expect them to go much, much higher.

I tell you all about them inside the second free report I'd like to give you -- *Pipeline Paychecks: Income power plays for the new 'Tight-Gas' revolution.*

You'll find out...

- ✓ Which two shale gas *producers* I expect to deliver you the strongest gains as America's energy rebirth jumps into high gear (I'll give you a hint: Chesapeake Energy isn't one them...)
- ✓ Which two shale gas *transporters* I expect to hand you the strongest gains. In 2005 we closed out a 182 percent return from just one gas transporter. This time I'm expecting to light up our model portfolio with two of them!
- ✓ And, how you can boost your income with yields of 3.9 to as much as 8.7 percent from each of them!

You can get this report free of charge as well.

I'll show you how in just a moment. But first, there's one more type of profit opportunity I think you'll want to know about...

You see, by this point most people think they've covered all their bases and are set to make a bundle...

Little do they realize they're still leaving a TON of money sitting on the table.

Which brings me to:

Money Multiplier #3: GRAB THE ADDITIONAL GAINS MOST INVESTORS WILL MISS

Most investors become so focused on finding stocks that are involved with pulling oil and gas out of the ground; they forget to take a look at the peripheries. And that's a real shame...

Remember, the companies with boots on the ground aren't the only ones who will profit from this sudden rebirth of American energy...

A lot of companies on the front and back end of the process will reap tremendous benefits as well.

Companies who provide replacement parts and upgrade parts will see their business soar...

Companies who rely heavily on oil and gas to produce their end products will gain *tremendous* benefits from it...

And companies involved with *other* types of unconventional oil will get a big boost from it too...

After all, more oil revenues generated onshore mean more funding for exploration offshore.

Bottom line: There's plenty of *additional* money to be made at both the front and back ends of the spectrum...

Which is why I'd like to rush you a third report free of charge -- *Forgotten Cash Cows: Three overlooked energy plays that could hand you big additional profits.*

In it I reveal:

- ✓ A company that is light-years ahead of the competition in performing remote sensing and exploration. It's the world's largest offshore drilling contractor. It's the leading provider of drilling management services worldwide. And its stock is set to rock!
- ✓ A company that is the leading producer of compression engines and high-strength metallurgical components used for oil and gas applications. These guys are so advanced, NASA called them for help with test equipment for the space shuttle! If you truly want to maximize your energy profit potential, holding shares of this company is a **MUST...**
- ✓ And a chemical company that is simply too good to pass up! It's has a 114 year history of success. It is one of the top five chemical producers in the world. It is already rapidly expanding its U.S. operations. And I expect its shares to skyrocket 48 percent in as little as 6 months!

All three picks are primed to hand you *additional* profit opportunities most investors will miss...

And -- together with the picks in the other two reports -- they're the perfect way to help ensure you grab all of the rewards this new wave of convergence has to offer.

No more stressing out about how you'll pay the bills. No more worrying about covering the mortgage. And no more uncertainty about your retirement -- or your financial future...

The American dream will be alive again. *Your* dreams will be within reach again.

\$100,000 into \$527,835 in 10 years

So how can you begin taking advantage of these money multipliers right away?

Well, as I mentioned earlier, I'm the editor of the resource investment newsletter **Outstanding Investments**.

The driving goal of **Outstanding Investments** is to find safe, simple resource investment ideas that are capable of delivering you life-changing gains.

And for more than twelve years now Outstanding Investments has done just that: It has helped a lot of people make enough money to change their lives for the better...

"THANKS FOR ALL THOSE GOOD OI PICKS OVER THE PAST 5 YEARS - I'VE MADE OVER \$100,000 FROM A VERY SMALL BASE. THANKS FOR ALL YOUR HELP!"

- Jason D.

MARIO S. WAS SO ECSTATIC HE EMAILED INTO TELL ME THAT IN A LITTLE OVER A YEAR HE TURNED \$60,000 INTO \$330,000 WITH JUST ONE PLAY.

"IT'S DIFFICULT TO BE UNHAPPY WHEN ALL THE RECOMMENDATIONS I HOLD FROM OI ARE UP A MINIMUM OF 36%."

- Jeff B.

"MY STOCK PORTFOLIO HAS INCREASED 52% IN 8 MONTHS AS A RESULT OF THE INSIGHT OF OUTSTANDING INVESTMENTS. I PLAN TO BE A MEMBER FOR YEARS TO COME. THANKS!"

- Fred H.

"THANK YOU SO MUCH FOR THE OUTSTANDING WORK YOU ARE DOING. OVER THE LAST FEW YEARS YOUR IDEAS HAVE CHANGED MY LIFE!"

- Zach T.

As I mentioned, in 2012 we even had the honor of being ranked the No. 3 Newsletter for 10-year Return by The Hulbert Financial Digest. In their report, HFD confirmed that Outstanding Investments has shown its members an average annual return of 18.1% for the past 10 years running...

Overall Performance Scoreboard

The rankings below show which newsletters that the HFD follows have performed the best, on both a total return and a risk-adjusted basis, over various lengths of time through December 31, 2011. (Page 7 contains a special ranking of just mutual fund letters and portfolios.) A letter's ranking is based on an average of its several portfolios in the event it recommends more than one (including any the letters may have discontinued). You can find 15- and 25-year rankings at <http://bit.ly/1Z0fx1> and <http://bit.ly/AkhtFA>, respectively.

*Newsletter hasn't published since 2006, though not formally discontinued.

In their report, HFD confirmed that **Outstanding Investments** has shown its members an average annual return of 21.7% for the past 10 years running...

Imagine what life would be like now if your money grew at 18.1% a year for 10 years... That's enough to turn \$100,000 into \$527,835. And you could have done it in one of the harshest economic climates since the Great Depression.

And you could have done it in one of the harshest economic climates since the Great Depression.

Here's the thing though...

I believe the profits we're on the cusp of making from the re-awakening of U.S energy will make all of our past gains look like pocket change...

I believe the wave of wealth that is about to be generated by the rebirth of America will be unlike anything we've seen since the dawn of the tech age...

And I KNOW those investors who get in NOW - right at the start - stand to profit the most from it.

Who do you think made more during the great railroad boom: Investors who acted as soon as the first locomotives got under way... or those who waited until every town had a train station?

Who do you think retired in greater comfort and ease: People who invested in General Electric and RCA at the start of the electronics age... or people who waited until every home in America already had a television?

And who do you think is going to make the most money from America's new energy era: Those investors who get in now, at the head of the crowd... or those who wait until shares have already tripled or quadrupled in price?

The nice thing is, *you can* get in ahead of the crowd. And *you can* see gains from the best shale oil and gas plays right from the start.

You have the opportunity to look through all of my research -- and receive all of my reports -- with absolutely no risk or obligation.

Simply let me know you'd like to take a trial subscription to ***Outstanding Investments***, and I'll immediately give you access to:

- ✓ **Special Report #1:** *Back On Top: Seven ways to bank a bundle with the rebirth of American oil*
- ✓ **Special Report #2:** *Pipeline Paychecks: Four income power plays for the new 'Tight-Gas' revolution*
- ✓ **Special Report #3:** *Forgotten Cash Cows: Three overlooked energy plays that could hand you big additional profits*

Each month I'll also send you the latest issue of ***Outstanding Investments***.

I'll keep you up to date as this rebirth of American energy unfolds.

I'll show you exciting, unexpected new ways to make money from it.

I'll keep you posted on how our picks are doing.

And I'll even let you know when it's time to cash them out.

Plus, you'll automatically get any new special, moneymaking reports I write the moment they're released.

I'll give you an *entire year* to decide if this is right for you

So how much does membership cost -- and how can you get started?

Normally, a one-year subscription -- including everything mentioned here -- goes for \$99.

Act now though -- through this special introductory offer -- and you can try all of my picks and research for HALF-OFF the normal rate...

You get an entire year for just \$49.

That amounts to just 96 cents a week -- less than a cup of coffee.

Want to enjoy even greater savings?

Through this special introductory offer, you can get two years of ***Outstanding Investments*** for just \$89. A savings of 55 percent off the regular membership rate.

Best of all, regardless of which you select -- a one-year membership or a two-year membership -- you can put my stock picks to the test without obligation for an entire year.

That's right: Not 60 days... Not 3 months... One full year!

I want you to be 100 percent thrilled with the results you get from ***Outstanding Investments***...

If your membership doesn't pay for itself several times over -- or if you are unhappy for ANY reason -- simply let me know any time within one full year of joining and I'll issue you a full and immediate refund.

No 'restocking' fees. And no hidden service charges. Every last cent of your membership will be refunded without question.

Plus, all the issues you've received -- and all the reports I've sent you -- will be yours to keep, free, just for giving it a try.

America's newfound energy is going to drastically alter our lives -- and our nation -- for decades to come. I have never been more certain of anything in my entire life.

You've seen it for yourself -- the change is already under way...

And the sooner you act, the more money you stand to make.

I urge you -- don't delay, give membership a try today.

To get started, simply click on the link below to open a secure order form. Your order will be processed immediately. And you'll have full access to the **Outstanding Investments** website - - and all three special reports -- within minutes.

Sincerely,

Byron King
Editor, **Outstanding Investments**
January 2012

P.S. A lot of people are going to make money as America rises back to prosperity. Will you be one of them? Don't let this incredible opportunity get away - try **Outstanding Investments** today.

You'll get immediate access to all three free reports. And you can even put it to the test for an ENTIRE year before deciding if membership is right for you.
